

ABSTRACT OF THE DISCLOSURE

This invention relates to a toner for image formation that is used in developing an electrostatic latent image. In the toner of the present invention, an addition of a polyglycerol compound allows exhibiting an effect of dispersing a colorant in a water-repellent binding resin, thereby allows obtaining uniform dispersion by one-time kneading. Furthermore, since the degree of esterification of the polyglycerol compound is made 50% or higher and the degree of polycondensation n of polyglycerol is made from 9 to 30, even when the polyglycerol compound is added, the deterioration of electrostatic charging property and the filming can be prevented.
